

2016 Proposed Desired Future Condition's for Mid-East Texas Groundwater Conservation District

The Board of Directors of the Mid-East Texas Groundwater Conservation District met in a duly filed and noticed regular meeting on March 22, 2016.

An agenda item at this meeting was the adoption of proposed Desired Future Conditions (DFC) of the aquifers located within the boundaries of the District. After duly considering the information pertaining to the DFC's, the Board made its decision regarding proposed DFC's for the relevant aquifers of the District. Mid-East Texas GCD is a part of Groundwater Management Area 12 and has worked diligently with each District to derive DFC's for each aquifer within the District based on average district-wide drawdowns within each aquifer.

The proposed DFC's for the Mid-East Texas GCD, stated as average district-wide drawdowns from 2000-2070, are presented below in the following table.

<u>Aquifer Name</u>	<u>METGCD proposed DFCs 2070</u>	<u>Current DFCs</u>
Yegua-Jackson	15 feet	5
Sparta	5 feet	0
Queen City	2 feet	0
Carrizo	80 feet	55
Calvert Bluff	90 feet	70
Simsboro	138 feet	115
Hooper	125 feet	95

The Mid-East Texas GCD Board of Directors requests that GMA 12 accept and adopt these DFC values. The Board of Directors also request that the proposed DFC values be adopted with a 5% allowable variance for the Simsboro aquifer and a 10% allowable variance for all other aquifers.

This recommendation comes from the Executive Committee pursuant to a meeting held on February 23, 2016.
